

biscoPro INSPECT

(Free Office Management System)

> Manage inspection risk & liability

detailed audit trail and integrated photos

> Ensure inspection quality

intelligent check lists with guidance notes

> Improve productivity

quick and easy to use complete, inspections in record time

biscoPro Inspection is a mobile inspection system that improves productivity while providing a liability and risk management backbone with a detailed electronic record of each inspection, including the ability to embed photos.

It is easy to learn and fast to use and is designed to ensure that inspectors complete their tasks quickly and accurately and they can even print the results while out on the road.

Many organisations strive to ensure consistency between inspectors, so to assist this you can add short text notes or fully formatted instructions, including images or graphics to the intelligent check lists.

An integrated document management system means users have all of the documents they may need on the road, saving on time lost returning to the office for missing information.

Inspections are data driven, meaning that it is easy to add, edit or remove the details of each inspection.

The system records who performed the inspection, after checking to ensure that they are suitably qualified.

biscoPro Inspection can manage the entire process for you, or become a mobile front end to your existing office and document management systems.

Manual or automatic inspection determination. The user can define a set of characteristics for the inspection and the system can automatically determine the schedule of inspections and the required items within each inspection, or manually build the inspection details.

For building-related inspections we can also use a 3D building model to determine automatically which inspections and which items

within the inspection are required for the particular building.

Systems interfaces – if you have back-office systems that determine the inspections **biscoPro** can pick them up and provide them to mobile users, synchronising the results back.

biscoPro Inspection creates an inspection audit trail for the inspection and can be easily analysed with our reporting tools or by exporting to MS Excel.

Operate remotely. Work on or offline. Connect with the office to via the internet or LAN to download new inspection data and to upload results.

biscoPro INSPECT

Possible Applications

- > Construction compliance or quality assurance
- > Pre-purchase inspections
- > Fire department inspections
- > Food or Health checks
- > Safety system checking
- > Building warrant of fitness

System Architecture

FEATURE	BENEFIT
Database system	Provide easy analysis and auditing, vital for managing risk and liability.
Inspection planning	Plan who inspects what and when.
Integrated photo capture	"A photo speaks a thousand words" but is only relevant if captured in context within the inspection. Combines photos into a PDF document.
Data driven inspection details	Easily add or edit the items that make up an inspection. Inspections can include detailed instructions to improve consistency and standards.
Time, distance, and cost tracking	Track who does what, how far they travel, and any disbursements.
Manual or automatic schedules	Build a schedule of inspections manually or automatically.
Inspections determined by building characteristics	A 3D building can generate inspection requirements automatically.
Linked to 3D building model	Use the 3D model to visualise inspections: make a selection and see the inspected item's location in 3D.
Portable documents	Makes documents and files related to properties, projects, inspections, office libraries, or anything else available in the field.
Linked instruction information	Ensure that every inspector knows what to check and uses a consistent methodology for every inspection detail.
Integrates with back office systems	biscoPro Inspect can operate as a complete stand-alone system or it can add mobility to your existing office systems.
Store results in your document management system	Create an inspection result report which can automatically load into your document management system for sharing with others.
Integrated reporting	Provide for easy monitoring and analysis.
Web Planning Module	Allow external parties access to planned inspections.
